Telekinetic - Indie Horror: The concept is simple: a head bumped, and a lot of people died. But instead of falling into the void, this head endows itself with a very unusual gift - telekinesis. This allows it to pick up and throw anything, as well as use other physical abilities: attract objects, repelling. Not only that, but the telekinetic heads are replaced by mechanical (the right hand is just a plastic replica). As a result, your life takes a dangerous turn. You start working in strange places, and carrying various objects. You even go to the investigation of paranormal phenomena. To do this, you need to solve puzzles and find clues. Vengeance: Telekinetic. In addition to your telekinetic head, you are also gifted in a variety of other talents, which will become more useful in the course of your adventures. After all, the criminal, who tried to kill you, is waiting for your return. The track of events becomes more and more detailed, with every new place you visit - will be a difficult task to stop the danger.

Game Story: Telekinetic Telekinetic - you know, where you suffer from mechanical head. But the first thing you experience in this game is not so mundane. You come to your senses and you realize that the place where you are is a very large, strange home, with strange objects. At the same time, your head, instead of its natural counterpart, is replaced by a plastic replica. You have lost a lot of blood and you sense a strong smell. You lift yourself up, and find that people around you have been murdered. Your powers don't work in this place, and you even don't know if they have deliberately disabled them. There is a room with two metal bars, where you hear sounds, as if something is trapped. There is blood everywhere, and the place is silent and gloomy. So, finally, everything begins to go down. And then it starts. At first, it seems to you that time is going too slowly, but then you are unable to recall a day, for you, nothing goes as it should. You are trying to find the source of these strange events and finding ways to stop the killer. But, all of this doesn't succeed, you are returned to a state of mind, you cannot understand where this happened and what happened that. But at some point, you start to do things, you are connected with objects, you

surfers, thanks to its blazing-fast performance and seamless integration with the rest of the operating system. Google engineers have been pushing the limits of the browser ever since it was first launched in 2008, but that's what superpowers are for. Still, as the software matures, there's always room for improvement, and new features are launched with much fanfare, only to never see the light of day. Google's latest Chrome Experiment is a major change to the browser called Hands On. The Chrome Hands On program lets Chrome users try out the next big thing without it being officially released, and these experiments are given early access to the latest developer builds of the browser. Last month, Google added hands-on chrome to the Chrome Dev channel, with the result of a constantly evolving browser that has a few problems: It breaks too much the development process and it is impossible to turn it off. So, I was really excited when Google announced a hands-on experiment called 'Chrome Hypervisor', due to finally enable direct Google Chrome access to the opaque Chrome machine. Even more exciting was the fact that the latest build of Chrome Hypervisor is a pre-alpha, meaning that it is already quite stable. Ultimately, Chrome Hypervisor uses a Linux kernel (not the Linux kernel) micro-kernel, basically a kernel in a kernel. According to the developer documentation, "A hypervisor is a piece of software that runs on top of another piece of software, and more specifically runs another operating system as a virtual machine." Essentially, it makes it possible for any sort of application to run in another operating system, in this case, any Windows application, which would in fact create a new operating system to run within the Chrome Hypervisor. As of now, Chrome Hypervisor is fairly basic, but in a future versions, it could pave the road for Chrome OS on the desktop. In fact, the page for this upcoming version of Chrome Hypervisor explicitly states that "Chromium OS is in development, and supported end users will eventually get the ability to launch an entire operating system inside of Chrome without installing it. For now, we expect most of the

options to be available before those end users can deploy it." Currently, the fully functioning version of Chrome Hypervisor from the Linux-based Chrome Hypervisor can only run applications from the latest developer channel. The version of Chrome Hypervisor
