This is the first game I played. Do not get it if you want a good point and click adventure game. You can play the tutorial and then that is it.So if you want a good story then get the original.I have played many adventure games and I like that it is an action game too.Gameplay Blast Brigade vs. the Evil Legion of Dr. Cread is a beat 'em up/RPG hybrid with a focus on action, story, and presentation.Not only can you battle your enemies with your fists, you can also use the environment around you to swing your weapon from above and into your enemies as well.You'll engage in hand-to-hand combat, cross between brawling and platforming, in no time!There are also RPG elements to the game as you can level-up and improve your character's weapons and skills.The game is very colorful, filled with hand-drawn character portraits, enemies, and backgrounds. You can also fully customize the appearance of your character, which includes everything from character's eyes to his or her hair.Each stage is a random three dimensional environment, ranging from a whole city, to a desert, to a cave. There are multiple ways to defeat your enemies and these are usually fixed in the areas you visit. There are also other options such as jumping on your enemies to cause massive damage or defeating them with environmental traps.There are two different types of action, with the latter being all about attacking. When you're done with the action, you can always go back to read the story and watch the cutscenes. This game may be hard at times, but it is not frustrating. The enemies tend to stay off screen unless they are right in front of you, and I think this is a nice touch since you do have to manage your actions in certain sections of the game.The puzzles are fair, and there is no silly action sequence. The music is good.There is a variety of enemies, and I think they look pretty good.There are some good voice acting, and they all have fun with the jokes and sometimes the witty dialogue.The game plays much better in the Gameboy Color than the previous Gameboy version, and has a much better feel to it. I hope to see more Gameboy Color and Gameboy Color Adventures games to be released in the future.All in all, this game is worth a shot if you are looking for an interesting, quality title.A neat twist to a rather standard fantasy-action-platformer adventure romp

### What's new:

**Introduction** The Super Tank 59 the Tigers of Iwata is a very unique and relatively “new” tank. It was around the beginning of World War 2, In Germany had become known that the Japanese were developing a new and overwhelming weapon in Europe. Coaxial multiple-barrel tank guns were designed to be fired from a modern 105mm barrel-however, this was the Tiger I tank. This is a tank that is truly a legend. Currently, it is the fastest, largest, and first of its kind, almost a dream warrior. Is such a vehicle even meant to exist or it’s a product of hard work, genius, shoddyness and luck? There were many archetypes used by the Axis during the war. But this one, since most of the automotive giants believed it would be completely impossible to build. Many honed their skills to the best they possibly could to create and design a vehicle so that the Japanese could one day truly make a machine capable of displaying the old styles of war, same tactics used a hundred years before, the way they were used to. One such attempt and attempt to design the tank was by the Iwata Motor Company and was adopted by major test facility Kobayashi Research. The first test was completed in 1935, but finished dead on time and Kobayashi conducted a few test model shells than the project’s brief (which was to create a quick maneuvering tank). Similar examples of research and idea were completed by other companies such as Iso before they disbanded. The failure of the Iwata car was the main reason that most people forget about it. The decision was basically to jump straight to the 1942 production vehicle that was so strange, which did not work and never was a one and only. The Vehicle The expected date and release of the Iwata mass-produced car or truck was rumored somewhere around 1942. The actual date of release after the research and theories was in 1943. All the order is said to have been placed at the end of 1942 in order to meet the deadline. Because of the defective design, which was declared unusable in three different test models, an alternative idea was substituted. Instead of producing the tank, the idea was perhaps to redesign to conventional Mack sight. The car proved to be an objective that was very challenging and great vehicle design, but many things were wrong. It only had 2 seats, which was fitted with 5 passenger seats back
